

Answer 1st three questions in the answer sheet, for practical part do it in your IDE and send the compressed file with the answer sheet

Q1. What are Lifecycle hooks in Angular? Explain some life cycles hooks

Q2. What is the difference between AOT and JIT? What is the advantage of AOT.

Q3. Difference between structural Directive, Attribute directive and components.

Q4.

- You are required to develop an Employee Management Information System, which for now has three basic roles (super admin, department admin, employee). Develop user interface for super admin having following sections and functionalities:
 - Dashboard to see total of all employees, departments, department admins
 - Manage all departments (CRUD)
 - Manage all employees (CRUD)
 - Employees Profile

Note: Develop UI for above mentioned functionalities only in Angular

Q5: Given the API (<https://mcadmissions.ajk.gov.pk/enterworker/api/admin/projects>)

You need to make a page which will send following values in this Post API

id

customer_id

name

description

street

postal_code

city

start_date

end_date

Write your name instead of name.
